

Why IAQ in Factories?

Key Benefits

- Create a safe and comfortable environment by mitigating environmental impacts.
- Monitor and prevent exposure to particulates and dangerous gasses.
- Promote the health and wellness of occupants by improving employee productivity and decision-making.
- Optimize building occupancy and the performance of buildings by implementing energy efficient solutions.
- Lower operational costs like maintenance, healthcare and other liabilities, to increase the bottom line.

A cost effective, next generation solution in a single device to deploy throughout a factory for continuous long term indoor air quality monitoring...

Stay In Compliance

Continuous accurate & precise indoor air quality monitoring in any infrastructure with never before seen information and analytics that result in better indoor spaces, everywhere in the world.

- **Monitor** key indicators of air quality in real-time using a single wireless, cloud connected device with 9 built-in sensors (PM₁, PM_{2.5}, PM₁₀, CO₂, CH₂O, VOCs, Temperature, Humidity, Pressure) so that your facility is always in compliance with OSHA workplace regulations.
- **Create** safer indoor environments by identifying exposure to paint, fumes or particulate matter.
- **Run** building management systems on an as-needed basis and ensure the most efficient use of energy with access to data anytime, anywhere for facility managers via a mobile phone or on the web.
- **Determine** if mechanical & air filtration systems are effective, optimize systems, and lower operational costs.
- **Know** when to take action and prevent a problem from scaling with sophisticated alerts via text or email.
- **Benefit** from a large scale solution enabling rapid deployment of a single device and open APIs that enable integration with building management systems, simplifying everything.
